

# My personal portfolio website

## Ian Pinto

### Overview

I created a **personal portfolio website** that presents some information about who I am and my achievements and skills as a software engineer. I'm studying software engineering and I believe that this will be an excellent way to showcase my web development/design skills and hopefully improve my employment prospects.

#### Target audience:

Class: middle-upper class

Nationality: most likely Australian or Indian

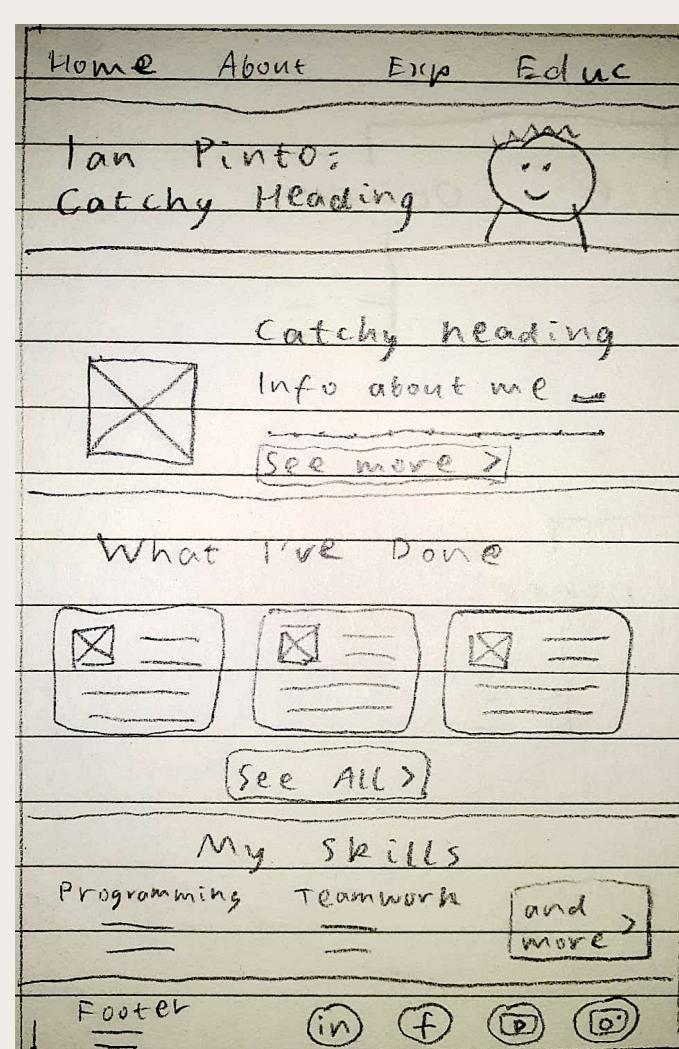

Age: 40-60

Institution: some tech company, e.g. Google

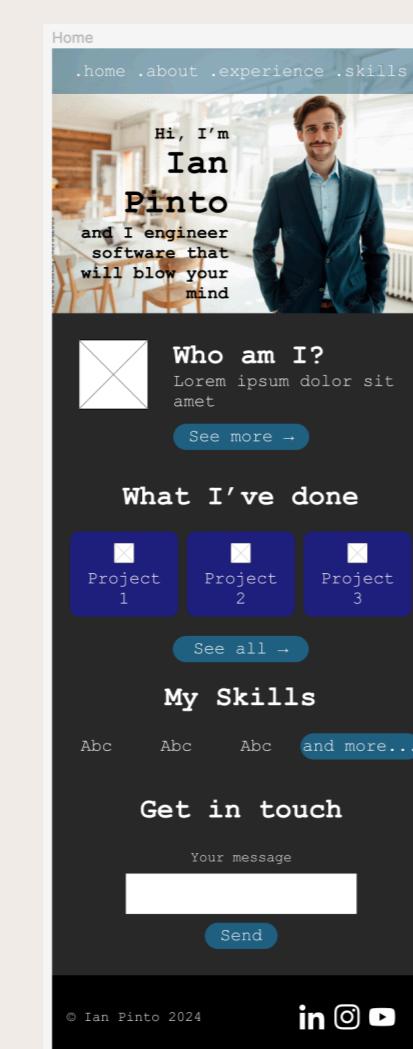

Gender: most likely male

### Lessons learned

- Use flex box more often. I found it easier than using media queries for responsive design
- Adding colour and images really helps make a site look nicer, even if the images aren't professional
- Having a (mostly) clear vision of a site's design beforehand will help when actually creating it

### Future work

- Look into JS animations and use them to make my website 'pop' and look a bit less bland
- Look at other sites and their design choices - colour, font, positioning etc. Improve my own design accordingly
- Add more of my skills and experience
